

# ***Ali CMB Polarization Telescope***

Hong Li

Institute of High Energy Physics

Sep.7 2019@BNU

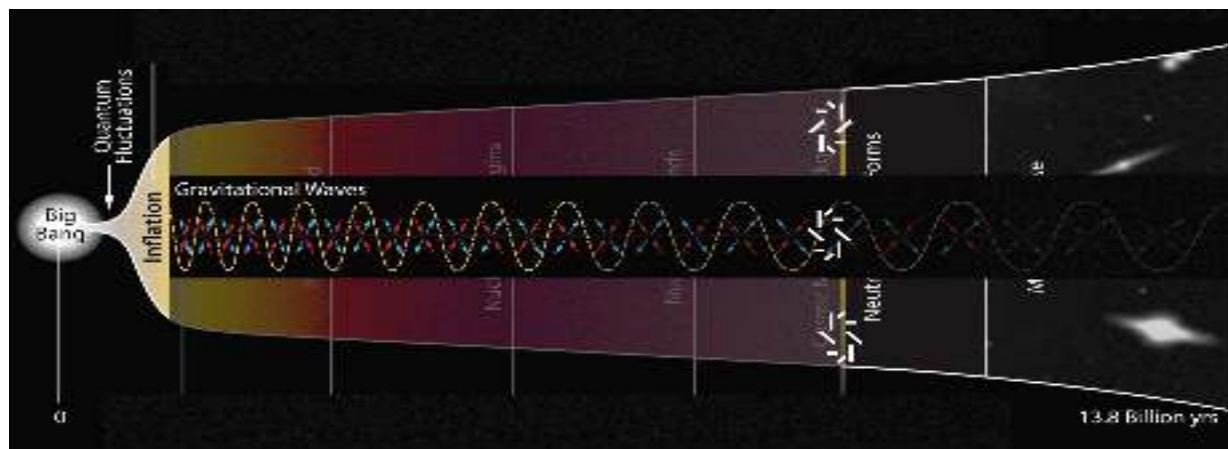

# Outline

- **Brief introduction for AliCPT**
- **Site**
- **instrument**
- **AliCPT-1 science and data analysis**
- **summary**

# Ali CMB Polarization Telescope

- A ground based CMB polarization telescope
- B mode science: BB, TB, EB measurements  $\rightarrow r, \alpha \dots$

Credit: JPL/BICEP team

- AliCPT-1: on going project
  - Proposed in 2014, and launched in 2016.
  - 2016  $\sim$  2021
  - A small aperture Telescope@5250m, 95&150 GHz, 4 modules:  $\sim$  7000 dets
- AliCPT-2: planning in progress
  - 2021  $\sim$
  - 19 modules in AliCPT-1
  - +/- large aperture Telescopes@more frequencies...
  - $r$ , non- $r$  science, e.g. neutrinos, Dark energy ...

# AliCPT-1 collaboration

- Led by the IHEP, the international cooperation includes: about 100 scientists from China, US, Europe.
- Funded already by the CAS, NSF of China.
- Executive board: Xinmin Zhang, Chao-Lin Kuo, Fang-jun Lu

# AliCPT-1 Work Breakdown and schedule

## AliCPT-1 schedule :

- Mar. 2017, Start site construction
- Nov. 2018, Review and accept the building
- Dec. 2019, Finish Mount development, ship to B1 site and start commissioning
- Dec. 2020, B1 deployment and first light
- 2021-2022, Accumulate data and achieve CMB polarization map

Data analysis   Data transmission

# Outline

- Brief introduction for AliCPT
- **Site**
- instrument
- AliCPT-1 science and data analysis
- summary

# AliCPT-1 site

Located on a hilltop B1 ( $32^{\circ}18'38''$  N,  $80^{\circ}01'50''$  E),  
in the Ngari(Ali) Prefecture of Tibet,  
at an altitude of 5250 meters.

- The Himalayas is to its southwest and runs from northwest to southeast, separating the Ngari(Ali) prefecture from the Indian Ocean.
- AliCPT-1 (B1, 5250m) is only about 1.5 km to the current well-developed A1 station (5100m) of the Ali observatory.

It is only 30 km far from the AliCPT site.

# Current status of site @ 5250 m

Review and Accepted in 2018.11

See Yong-Jie's talk

# CMB observations on earth

Greenland

Ali, Tibet

Atacama

South Pole

e.g. SPT and BICEP

POLARBEAR  
ACTpol

[H. Li \*et al\*/arXiv:1710.03047](https://arxiv.org/abs/1710.03047)

**Ali: one of the most excellent sites for CMB observation on earth**

- **AliCPT-1 :**

- Can cover the whole northern sky;
- Will observe deeply on the low emission areas of the Milky Way in North

➤ **Ali Observatory:**

- Unique geographical advantages: large sky coverage.
- To realize the whole sky coverage from earth, together with the Atacama and South Pole telescopes.

# Outline

- Brief introduction for AliCPT
- Site
- **instrument**
- AliCPT-1 science and data analysis
- summary

# Current status of mount

- ✓ Being tested in factory now
- Will be shipped to site by end of 2019

See Cong-zhan's talk

## Azimuth:

- Range  $\pm 270$  deg
- Angular speed 5 deg/s
- Angular acceleration 5 deg/s<sup>2</sup>

## Elevation:

- Range 45–135 deg
- Angular speed  $>1$  deg/s
- Angular acceleration 1 deg/s<sup>2</sup>

## Boresight (Theta):

- Range 0–181 deg
- Precision 15"
- Angular speed  $>2$  deg/s
- Angular acceleration 1 deg/s<sup>2</sup>

# Current status of receiver

- ✓ Optical system: finished design and under fab.
- ✓ TES detectors: finished the detailed design.
- ✓ Multiplexing readout system: finished the detailed design.
- ✓ Cryostat: under fab soon

See Maria's talk

	AliCPT-1
Frequency	95/150GHz
Aperture	72cm
F factor	f/1.4
Number of detectors	~ 6816

(IHEP /Stanford)

- summary

# Simulation and Data analysis pipeline

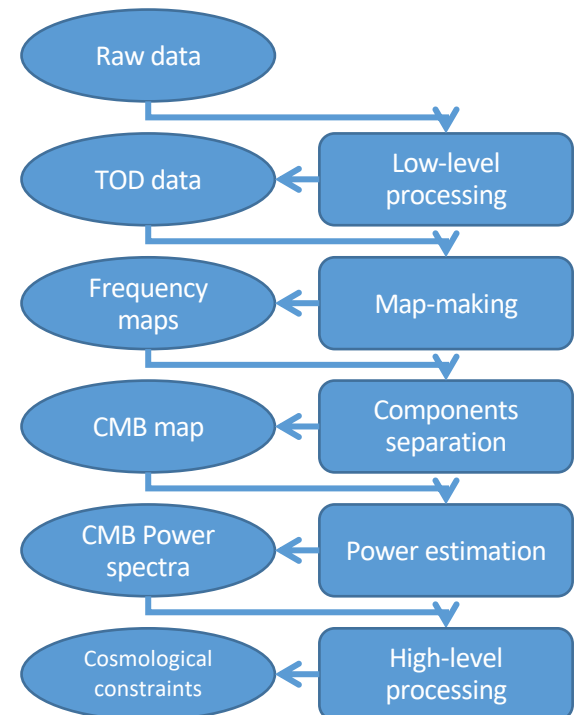

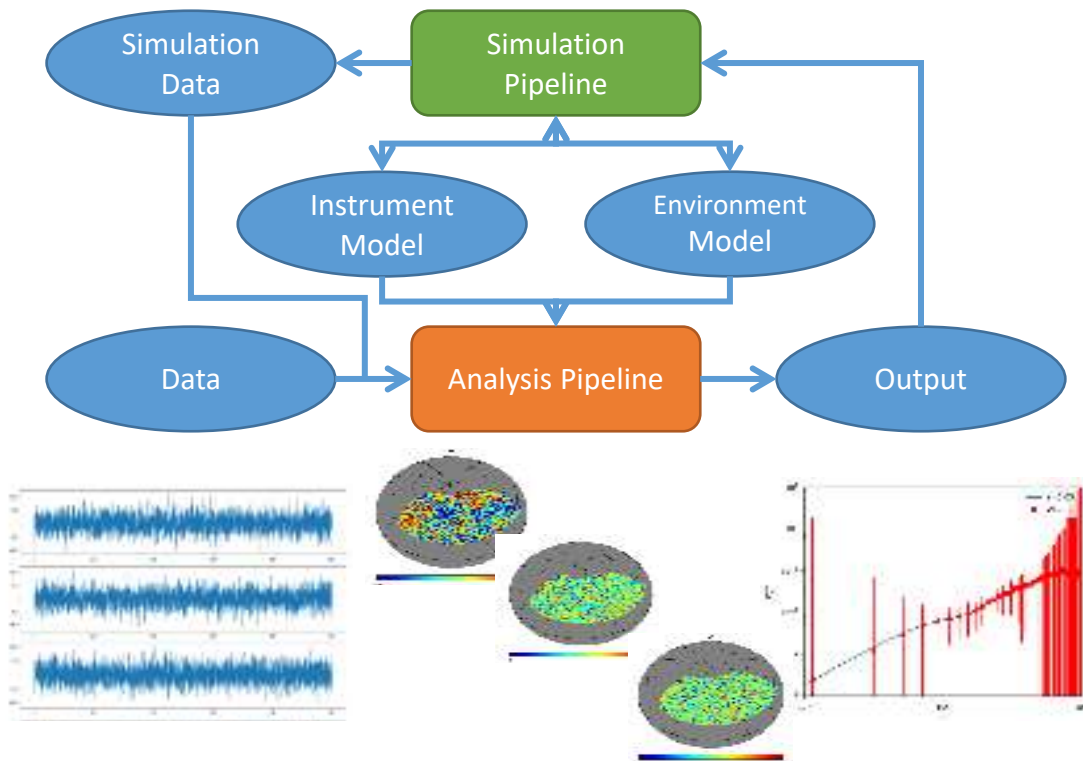

- IHEP, together with APC, SJTU, USTC, BNU and NTU, have established AliCPT-1 Science and Data Analysis team.

- ▶ Hong Li
  - ▶ Leader of science team
- ▶ Jacques Delabrouille (APC)
  - ▶ Senior advisor
- ▶ IHEP (Si-yu Li, Yang Liu, Hua Zhai, Zirui Zhang)
  - ▶ Architecture
  - ▶ Integration
  - ▶ I/O Management
  - ▶ General algorithm investigation
  - ▶ Map-making
  - ▶ Bandpass mismatch simulation
  - ▶ Beam systematic simulation
  - ▶ De-projection
- ▶ NTU ( Yu-han Tseng)
  - ▶ Scan strategy
  - ▶ Jack-knife solution
- ▶ SJTU (Le Zhang, Jian Yao, Zeyang Sun, Larissa Salatino, Ji Yao, Peng-Jie Zhang )
  - ▶ Components separation algorithm investigation
  - ▶ Components separation on B-mode
  - ▶ CMB x LSS cross correlation
- ▶ USTC (Wen Zhao, Shamik Ghosh, Jiming Chen)
  - ▶ E/B decomposition
  - ▶ Power estimation
- ▶ BNU (Bin Hu, Jinyi Liu)
  - ▶ CMB lensing reconstruction
- ▶ ... Science, early universe, models

2020.5: integration and testing

# Simulation and Data analysis pipeline

- AliCPT-1 end to end simulation: noise, systematic
- Scan strategy: hit-maps
- Data analysis pipeline: data selection, pointing, deprojection, map making...

# Preliminary concern on Scan strategy

- Characteristics of observation in Ali
  - Sky move fast: helpful for large sky coverage, but not easy to focus within one small patch.
  - “clean” area in north, also in south: helpful for going deep in north, also provide complementary for exiting southern sky observations.

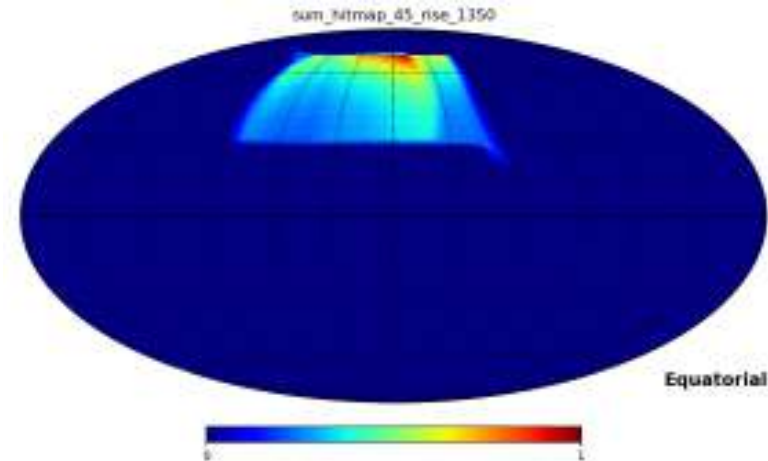

# Preliminary results of Scan strategy

- Concern on scan strategy
  - Fast scan.
  - Maximize observing efficiency.
  - Large elevation angle and long duration (detector/ground/atmosphere/sky noise).
  - Cross-linking: systematics control and efficiency
  - Uniform coverage / Redundancy.

RA~-115deg, DEC~30deg  
& RA~150deg, DEC~30deg

simulation results, Preliminary

# Simulation: sensitivity

AliCPT-1 is designed to have its first light in the winter of 2020

PLANCK 100 GHz & 143 GHz

Pol  $\sim 50$  uK arcmin in total

AliCPT 95 GHz & 150 GHz & Total

4 modules 1 season, median map-depth 14 uK arcmin

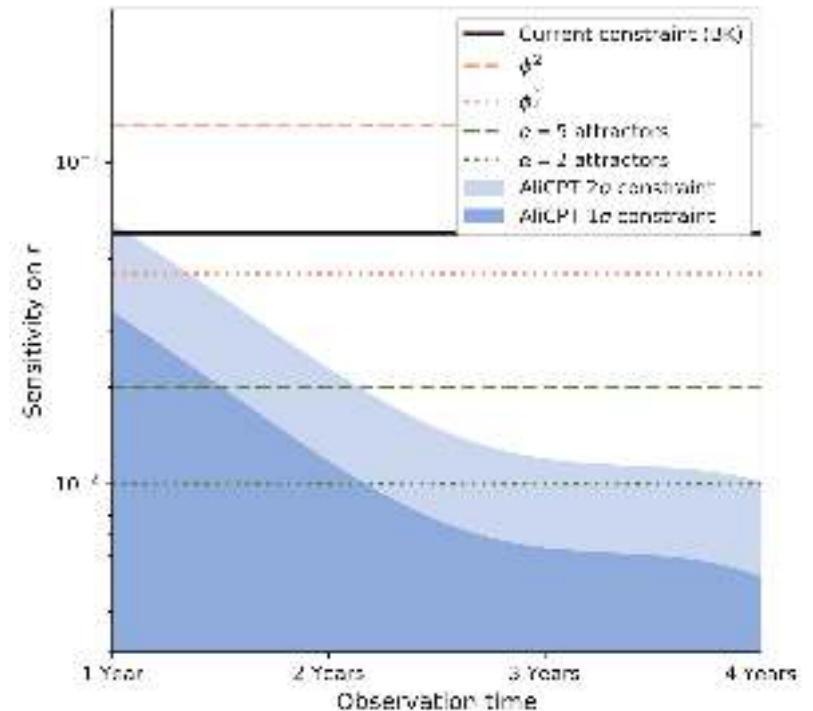

- Probing the primordial gravitational waves (PGWs) with **BB** spectra.
- Measuring the rotation angle, testing CPT symmetry with **TB** and **EB** spectra.
- Investigating the CMB polarization hemispherical asymmetry.
- Studying the cross-correlation between AliCPT and DESI.
- Studying the galactic foreground.

...

# Preliminary results from simulation

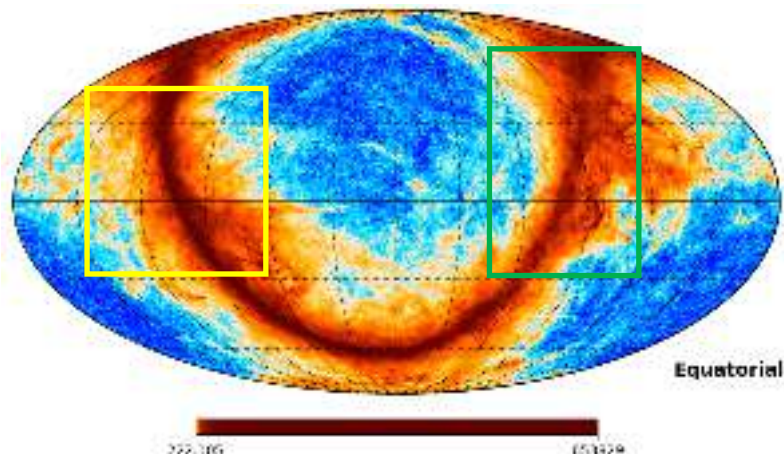

Simulation: BB power spectrum

Simulation:  $r$  sensitivity

# Cosmological study with AliCPT-1

- Cross correlate with DESI
- Scan galaxy: signals for foreground

J. Yao

# Summary

- AliCPT-1 target and time schedule:
  - 2014: project proposed
  - 2016: supported from CAS and NSFC
  - 2017 - 2018: site construction
  - 2019:
    - Mount: commissioning before the end of 2019
    - cryostat: delivery Dec. 2019
  - 2020:
    - B1 deployment and first light
    - data analysis pipeline: test from 2020.5
  - 2021 ~ 2022: Observation and data analysis
- Future plan: AliCPT-2

**Thank you !**
